## 1 PROBLEM

Let  $\mathbf{T}$  be the linear operator on a  $n$ -dimensional vector space  $\mathbf{V}$  and suppose that  $\mathbf{T}$  has  $n$  distinct characteristic values. Prove that  $\mathbf{T}$  is diagonalizable.

## 2 RESULTS USED

Diagonalizable	A linear operator $\mathbf{T}$ on a finite-dimensional vector space $\mathbf{V}$ is diagonalizable if and only if there exists a basis of $\mathbf{V}$ , consisting of eigen vectors of $\mathbf{T}$
Theorem	<p>If <math>\mathbf{v}_1, \mathbf{v}_2, \dots, \mathbf{v}_k</math> are eigenvectors of a linear operator <math>\mathbf{T}</math> with distinct eigen values <math>\lambda_1, \lambda_2, \dots, \lambda_k</math>, then <math>\mathbf{v}_1, \mathbf{v}_2, \dots, \mathbf{v}_k</math> are linearly independent.</p> <p>Let <math>S_k = \{\mathbf{v}_1, \mathbf{v}_2, \dots, \mathbf{v}_k\}</math>. Let <math>P(k) : S_k</math> is linearly independent. <math>S_1</math> is linearly independent. So, <math>P(1)</math> holds. Assume <math>P(k)</math> holds for <math>1 \leq k \leq n</math>. Therefore, <math>S_k</math> is linearly independent.</p> $\text{Let } \sum_{i=1}^{k+1} a_i \mathbf{v}_i = 0 \quad (2.0.1)$ <p>Applying <math>\mathbf{T}</math> on both sides, we get</p> $\Rightarrow \mathbf{T} \left( \sum_{i=1}^{k+1} a_i \mathbf{v}_i \right) = 0 \quad (2.0.2)$ $\Rightarrow \sum_{i=1}^{k+1} a_i \mathbf{T}(\mathbf{v}_i) = 0 \quad (2.0.3)$ $\Rightarrow \sum_{i=1}^{k+1} a_i \lambda_i \mathbf{v}_i = 0 \quad (2.0.4)$ $\Rightarrow \sum_{i=1}^k a_i \lambda_i \mathbf{v}_i + a_{k+1} \lambda_{k+1} \mathbf{v}_{k+1} = 0 \quad (2.0.5)$ <p>Multiplying (2.0.1) by <math>\lambda_{k+1}</math>, we get</p> $\lambda_{k+1} \left( \sum_{i=1}^{k+1} a_i \mathbf{v}_i \right) = 0 \quad (2.0.6)$ $\Rightarrow \sum_{i=1}^{k+1} a_i \lambda_{k+1} \mathbf{v}_i = 0 \quad (2.0.7)$

	$\Rightarrow \sum_{i=1}^k a_i \lambda_{k+1} \mathbf{v}_i + a_{k+1} \lambda_{k+1} \mathbf{v}_{k+1} = 0 \quad (2.0.8)$ <p>Subtracting (2.0.5) and (2.0.8), we get</p> $\sum_{i=1}^k a_i (\lambda_i - \lambda_{k+1}) \mathbf{v}_i = 0 \quad (2.0.9)$ <p>As <math>\lambda_i</math> are distinct <math>\forall i \leq k, a_i = 0</math> (2.0.10)</p> <p>Substituting this in (2.0.1)</p> $\sum_{i=1}^{k+1} a_i \mathbf{v}_i = 0 \quad (2.0.11)$ $\Rightarrow a_{k+1} \mathbf{v}_{k+1} = 0 \quad (2.0.12)$ <p>As <math>\mathbf{v}_{k+1} \neq 0 \Rightarrow a_{k+1} = 0</math>          Since <math>\forall i \leq k+1, a_i = 0</math>. <math>S_{k+1}</math> is linearly independent          By principle of mathematic induction, <math>S_n</math> is linearly independent.</p>

### 3 SOLUTION

Given	$\mathbf{T}$ has an $n$ distinct characteristic values and $\dim(\mathbf{V}) = n$
$\mathbf{T}$ is diagonalizable	Let $\lambda_1, \lambda_2, \dots, \lambda_n$ be distinct eigen values of $\mathbf{T}$ and let $\mathbf{v}_1, \mathbf{v}_2, \dots, \mathbf{v}_n$ be the eigen vectors of $\mathbf{T}$ . From above results we can state that $\{\mathbf{v}_1, \mathbf{v}_2, \dots, \mathbf{v}_n\}$ is linearly independent. And also given that $\dim(\mathbf{V}) = n$ . So, this set forms a basis of $\mathbf{V}$ . $\{\mathbf{v}_1, \mathbf{v}_2, \dots, \mathbf{v}_n\}$ is a basis for $\mathbf{V}$ consisting of eigen vectors of $\mathbf{T}$ . So, $\mathbf{T}$ is diagonalizable.
